Levant Trade

PUBLISHED MONTHLY AT CONSTANTINOPLE BY THE

American Chamber of Commerce for the Levant

(INCORPORATED)

ARTHUR B. FARQUHAR

One of the great men of American industry, Arthur B. Farquhar, recently died at the age of 86.

Mr. Farguhar was a life member of the American Chamber of Commerce for the Levant and one of the organizers, in 1912, of the Chamber of Commerce of the United States. From a lad on a Southern farm he forged his way up and became the owner of a world-renowned agricultural machinery plant at York, Pennsylvania.

After passing the four-score mark, Mr. Farquhar wrote an autobiography, one of whose fascinating chapters is entitled "The First Million is the Hardest ». In this chapter he recounts his trip to New York City, at the age of 19, to ask the rich men of that day how to make a million dollars. His own wisdom he summed up in the last chapter in the book, which contains the following:

And now, in conclusion, what does it all mean? What have these years taught me? Nothing of a startling nature - the incidents fade-but these principles remain:

1. That it is, as a rule, safe to trust human beings. Comparatively

few are unfair, if you are fair yourself.

2. That troubles and apparent difficulties are but stepping-stones to progress — the most practical way of learning — and, as Greeley said, . The

way to resume is to resume. >

3. That there is nothing that will take the place of work, either to gain success or to gain happiness or to gain both—and I think it is possible to gain both if, in the striving and working for success, the dollar is not put above the man.

4. That one can and must keep faith with oneself.
5. That God is not mocked. You cannot break his laws without suffering.

6. That one's only dangerous enemy is oneself. In the ultimate no

one can hurt you but yourself.

7. That friends are among the greatest assets - and the way to get

friends is to be a friend. 8. That one should never seek anything for which one does not give value. This avoids the disposition to speculate-which is one of the greatest dangers that beset the business man.

Following these rules, the world grows in interest and life is happier

with gathering years.

Silk Substitute vs. Natural Silk

by O. P. Austin

Statistician, The National City Bank of New York

« Rayon » as the new rival and perhaps substitute for silk is now designated by many of the countries in which it is produced, is, being manufactured in very large and rapidly increasing quantities, the annual outturn at the present time being estimated at over 100,000,000 pounds, or rather more than double that of the natural silk. It is now chiefly produced from wood. Originally it was produced by transforming cotton and other vegetable fibres of this character into a semi-liquid material which could be forced by pressure through minute openings in a metallic plate, in some instances no more than 2/1000 or an inch in diameter. Falling then into a chemical bath the thread by twisting with other threads of the same kind becomes of suitable size and strength for use in the manufacture of cloths and other fabrics. Four processes of its preparation are recorded in the discussion of its history, the fourth, however, that which utilizes wood pulp chiefly instead of the vegetable fibres being now the process principally in use.

Natural silk, for which the material is obtained by the silk worm from a vegetable growth, largely the leaves of the mulberry tree, is produced in climatic and general locations radically different from those in which the artificial product is supplied. While Japan, China, India and the countries bordering on the Mediterranean are the chief sources of natural silk, areas still farther north and especially in the north

temperate zone supply the bulk of the artificial silk. The material from which these countries obtain their raw product they obtain from their own forests, especially utilizing for this purpose birch and other woods of this general character.

The growth in production of the new substitute for silk has been extremely rapid and curiously, too, certain of the countries producing natural silk are not only accepting and utilizing it in their own markets but in some instances devoting large sums of capital to the production of the new substitute despite the fact that a large element of their rural population has heavy investments in the production and output of natural silk. Italy is a special example of this substitution of the artificial product for that turned out for centuries by her own people through the aid of the silk worm. The 1923 output of artificial silk in Italy was estimated at 10,000,000 pounds as against 35,400,000 pounds in the United States, 16,500,000 in England and 13,000,000 in Germany. France, which was also active in the natural silk industry, produced according to high authority 7,700,000 pounds of artificial silk, or rayon, in 1923, Belgium 6,000,000, Switzerland 3,700,000, and Holland 2,600,000. For 1925 the world's prospective outturn is estimated at about 150,000,000 pounds, or double the world's crop of real silk.

All this big outturn of the artificial product mean enormous investments of capital, being far in excess of the estimated value of the capital represented by the natural silk industry.

One especially striking feature of this new industry, and one which gives to it a peculiar quality, is that it supplies a textile material turned out solely by mechanical processes with the use of capital and labor, while all other textile materials as

wool, cotton, linen, etc., are of natural growth, hence, the feasibility with and rapidly increasing unlimited supplies of capital the world over of enormously increasing the quantity which may be supplied for clothing mankind as against the limitations which appertain to the production of other fibres, cotton, wool, linen, and natural silk. Money can be invested, labor employed, new factories established, and the outturn go on with greater rapidity on a greater percentage of increase than is possible with the outturn of the natural fibres upon which man has relied up to the present time for textiles with which to protect himself from the climatic elements of his surroundings.

All of the above suggestions of the importance of this new industry to the two great sections of the world, the silk-producing area and the areas devoting their attention to manufactures, grow out of some very recent developments in the United States in the enlargement of our mills and a very recent combination of a considerable number of smaller organizations under one general management.

Just how much capital is invested in these industries the world over can hardly be estimated. Recently published statements from Italy, once a big producer of raw silk, state that the capital invested in the artificial silk industry there has recently advanced from 600,000,000 lire to 1,000,000,000 and that the outturn of her mills has increased ten-fold in the last five years, bring Italy to fourth place in the world production of artificial silk, while recent financial arrangements for further enlargement suggest that Italy may take second place by 1927 and rank next to the United States as producer of this new clothing material. Still another report from Italy puts the total investment

in ten big rayon establishments at 2,000,000,000 lire.

Not to discourage those engaged in the production of natural silk or to explicitly encourage those engaged in the artificial silk industry, it seems quite apparent from a study of world figures of the silk production that the new substitute, «rayon», as it will probably be universally designated, (although objections to this title come from many quarters) is likely to outstrip natural silk production at an even more rapid rate of growth in the future than in the past.

All of the great manufacturing countries of the world in which large sums of capital are invested in any industry for which the world can supply consuming markets, are fully awake to the possibilities of this new industry and those great manufacturing countries practically all the nations of the north temperate zone either in Europe or North America. It is even stated that limited sums of capital are now being invested in the north temperate zone in the natural silk areas of Asia, so that capital in large quantities in the manufacturing countries the world around is in sharp rivalry with that invested in the production of natural silk. disposition of capital to enlarge its activities in this line is stimulated by the fact that it finds customers among the peoples of the entire civilized world capable of utilizing quantities far in excess of that which the natural silk industry can supply.

The United States, the world's largest producer of cotton, is at the same time the world's largest investor in and producer of artificial silk. The outturn of our mills according to a statement recently issued by the Viscose Company of the United States, a very high authority, was in 1923, 35,400,000 pounds out of a

world total of 97,000,000 pounds in that year, while a still latter statement estimates the world total in 1925 at 150,000,000 pounds with the United States still producing as large a percentage of the world total as in 1923, the year for which latest official figures are available.

The Boll Weevil

The best methods of cotton culture under weevil conditions are now well known, and since with the exception of the use of poison they are all contributory toward a good crop whether or not a serious weevil infestation occurs, there are no sound arguments against their use. United States Department of Agriculture summarizes the question of weevil control as follows: « In reality the production of cotton in the presence of weevils is nothing more or less than a race between the setting of bolls on the plant and the multiplication of the weevils, and everything possible should be done to aid the cotton plant in winning this race. > However, some expert planters have had success with moderately late planted cotton

growing of cotton under weevil conditions is expensive. Lessened soil fertility because of steady cropping, together with a diminished labor supply, has also contributed to the increased cost of cotton production in the United States. If the crop is to be profitable effort should be concentrated upon a heavy yield per acre rather than upon the planting of a large area. Only welldrained land should be planted to cotton, as on these soils the seed can be planted earlier and the plants come up more quickly. Such land can also be cultivated more frequently. A carefully prepared seed bed is likewise important.

A good early variety of cotton should be selected. The specific type to be sown must be determined by each locality for itself but it is not necessary to sow a small-bolled or extremely short-stapled variety to secure early maturity. A number of early and prolific varieties yield cotton of excellent staple.

early planting While is more important since the advent of the weevil it is unwise to run the risk of losing both the seed and the labor involved by forcing the season too much. Planting should be done as soon as the ground is warm and the danger of cold weather past. Planting before the ground is thoroughly warm, however, is likely to result in a poor stand, which is a serious matter under boll weevil conditions. The delinting of seed assists in quick germination. Within certain limits a larger cotton plant will mature more fruit when the amount of space allotted to it is increased. With the weevil on the ground, however, the late bolls may be lost in any event so that the requirement of an early crop makes a somewhat thicker spacing of advantage.

If cotton is to win its race with the weevil it must be pushed as rapidly as possible, and the use of enough of the right kind of fertilizer is of great importance in accomplishing this object. Along with fertilizer must go adequate cultivation, begun as soon as possible after planting to give the young plant every chance to reach early maturity and continued frequently throughout the season. The Department of Agriculture recommends the rule conce a week and one in a row ». Some authorities state that it should be worked until it laps in the rows or begins to open.

With average weather cotton planted in accordance with these requirements should offer promise of a crop large enough to justify poisoning the

weevil if heavy infestation occurs. Calcium arsenate is the only chemical which has thus far proved its practical merits for this purpose. During 1924 there was a record production of arsenic. Sixty-five per cent of the total refined and crude arsenic was obtained from ore roasted primarily for its arsenic content as compared with only 10 per cent in the previous year when the bulk of the output came as a by-product of the smelting of certain metals. During the year ending June 30, 1924 more than 43,600,000 pounds of calcium arsenate were produced, 20 per cent more than in the previous year. As very little trouble from boll weevil was encountered last year sales of arsenate were very much reduced and it is estimated that at the end of the season 25,000,000 pounds were left in the hands of manufacturers, dealers and consumers as compared with 3,000,000 at the end of the previous season. At least as far as early purchases are concerned favorable prices for calcium arsenate this season seem assured.

In some districts it has shown to be worth while to poison two or three times early in the season just before the squares are formed with a mixture made up on the basis of a pound of calcium arsenate and a gallon of molasses to one gallon of water. This is applied to the tip of the plant with a mop. Formerly it was recommended that dusting with calcium arsenate should begin when 10 to 15 per cent of the squares had been punctured but recent experience indicates that it may be advisable to begin when not more than 5 per cent have been punctured. good dusting machine which breaks up the powder and does not waste it, discharging the dust above the plants so that it may drift upon them, 2 pounds of calcium arsenate per acre have been found to be efficient, although from 5 to 7 pounds have been regarded as a standard application. The number of times it becomes necessary to use it during the season depends on the degree and persistence of infestation and whether or not rain washes it off. Three or four applications are usually sufficient.

The use of calcium arsenate will not pay on poor land or on imperfect stands of insufficiently fertilized and half-tilled fields of cotton.

«Cheerfulness

with Industry»

Just inside the door of the office at 165 Duane street in New York a typewritten notice pasted on the wall reads:

«You may buy a bag of cocoanuts or borrow \$1,000,000 any time between 8.30 in the morning and 5.30 in the afternoon. That's the kind of house this is.»

Beside it is another sheet, headed «The Ten Commandments of Businesss,» while just beyond is a transcript of a prayer of Robert Louis Stevenson's, asking that the round of «irritating concerns and duties» may be gone through «with laughter and kind faces»; that «cheerfulness may abound with industry.»

That, indeed, is the kind of a house, the L. Schepp Co. is, and de nonstrates also the kind of a man its founder is, who, recently announcing a decision to give away his surplus wealth to employes and old friends and as a means of assisting boys who show a desire to follow these principles, asked that his generosity be allowed to stand without being smade capital of.

Declaring that his sole purpose is to have the satisfaction of seeing his money do good in his own lifetime, the 84-year old merchant said:

- *I noticed in some of the papers that they refer to me as the *Cocoanut King.* Please note: I am not worthy of this title, neither does my firm handle more cocoanuts than others.
- Furthermore, I do not wish the cocoanut company to be coupled with my private affairs, or the matter made capital of for business. Every tub should stand on its own bottom.
- My act was prompted because I wish to be my own executor in disposing of my surplus money, thinking I could do it more satisfactorily than executors would after I was dead. I hope it will help to encourage others to do the same. >

Turkish Chambers of Commerce and Industry

Following are the main provisions of a new law regarding the Turkish Chambers of Commerce and Industry:

- (1) Each person exercising the profession of merchant and possessing a commercial establishment, money changers and brokers must inscribe as members of the Chambers of Commerce and Industry where they are residents. Besides this all artisans and small shop-keepers must be inscribed in a register kept by the Chambers, the cost of this inscription not to exceed 20 piasters; any place where there is no Chamber the Municipality will undertake the formality of inscription.
- (2) Persons inscribed who act contrary to the decisions of the Chambers will pay a fine of from 5 to 100 Turkish Pounds.
- (3) Companies with capital above 300,000 Turkish Pounds will be divided into categories according to their importance and will pay an

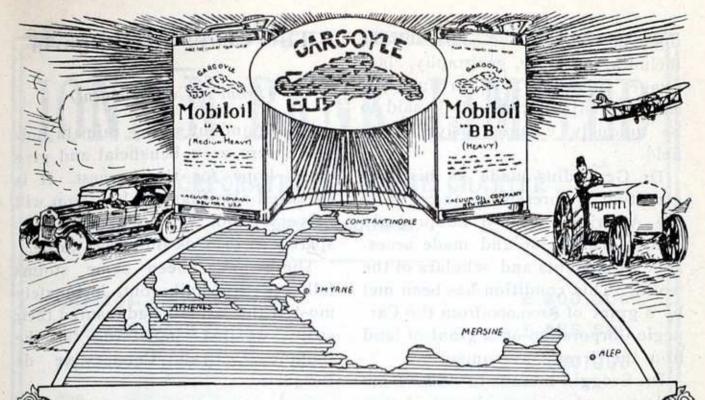

- annual membership fee of 50 Turkish Pounds as a minimum up to 1,000 as a maximum.
- (4) Receipts of the Chambers will be derived from the following sources:
 - a) Membership fees
 - b) Charges for formalities
 - c) Gifts
 - d) Profits from establishments created or administered by the Chambers
 - e) A part of the Government income tax (not superior to 5 %) as arranged with the Minister of Commerce
 - f) Various other sources
- (5) The Chambers of Commerce and Industry, will be in relations with the Ministry of Commerce and will be subject to the control and inspection of this Ministry.

A Library at Athens

Announcement has been made that Dr. Gilbert Campbell Scoggin, acting head of the department of Greek in the College for Women of Western Reserve University, will leave the university this June to assume duties as director of the Gennadeion at Athens, Greece.

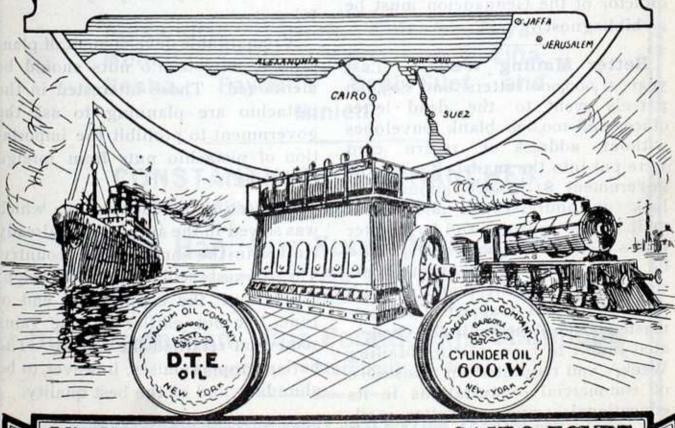

The Gennadeion is the library presented to the American School of Classical Studies at Athens by Dr. Joannes Gennadius, dean of the diplomatic corps of Greece, and for 40 years the Greek Minister to the Court of St. James's. Dr. Gennadius presented the library to the American school in honor of his father.

The collection comprises between 40,000 and 50,000 volumes largely collected by Dr. Gennadius, and to it will be added some 10,000 volumes accumulated by the American School during its 40 years of existence in Athens. The Gennadeion consists of manuscripts and first editions relat-

QVALITY OILS!

ACUUM OIL COMPANY SHARIA NUBAR PASHA

ing to Greece and Byzantium, including history, geography, language, literature, art, archæology, early Christianity, etc. It is said to be uniquely comprehensive in its field.

Dr. Gennadius made as his only condition in presenting the gift to the Americans that it be properly housed, cared for and made accessible to students and scholars of the world. This condition has been met by a grant of \$200,000 from the Carnegie Corporation on a grant of land from the Greek Government.

Dr. Scoggin intends to remove his collection of 10,000 volumes of rare books and first editions to Athens with him. He is a graduate of Vanderbilt University, and received his doctor's degree from Harvard in 1906. For 12 years he held a chair in the department of Greek of the University of Missouri, and also served on the American staff of the Encyclopedia Britannica before coming to Western Reserve. He is a bibliophile and fulfills the requirement of Dr. Gennadius that the director of the Gennadeion must be a «bibliognost».

Better Mailing Week.- Last year 21,000,000 letters and 803,000 parcels went to the dead letter office, and 100,000 blank envelopes without address or return card were put into the mails. It costs the government \$1,740,000 annually to look up addresses on misdirected mail. This expense, and far greater losses incurred by mail users, could be saved if each piece of mail carried a return address and if each parcel were well wrapped. The Postmaster General accordingly designated June 1 to 7 as . Better Mailing Week, and requested the assistance of commercial organizations in its educational campaign. Better mailing campaign literature was furnished by the Information Service of Post Office Department, Washington.

The Crops in Bulgaria

(From a Correspondent)

The abundant spring rains in Bulgaria were very beneficial and give great hope for the harvest. It is expected also that the hay crop will be very good, thus influencing prosperity as regards Bulgarian cattle.

There have been some storms followed by hail, but fortunately most of the farmers had insured their crops against hailstorms at the Banque Centrale Cooperative de Bulgarie.

The cultivated area this year is somewhat greater than that of last year. The increase is estimated at from 5 to 10%, according to the locality.

Owing to the abundance of sugar from beetroot, which remained unsold from last season, sugarbeet has not been planted in Bulgaria this year. In the South it has been replaced by tobacco, anise and sesame; in the north, its place has been taken especially by corn and tobacco.

A remarkable development of plantations of pistachio nuts should be mentioned. Those interested in the pistachio are planning to ask the government to prohibit the importation of pistachio nuts from foreign countries.

Harvesting of the barley, which was sowed in the autumn, has already started in the south of the country. The harvest will be at its height throughout the country by end of June, but not earlier as the rains somewhat retarded the sowing. The barley crop promises, however, to be abundant and of the best quality.

Foreign Service School

The Foreign Service School, established by the State Department at Washington, to provide trained personnel for the diplomatic service of the United States, has been opened with 20 students selected from several hundred examined last January The new school is one of the most important phases of the program for reorganization of the foreign service as set forth in the Rogers law.

The work of the school is to be directed toward sending out thoroughly equipped persons to represent the United States in both the diplomatic and consular branches of the unified foreign service. The training will consist of lectures and practical work in the State Department.

The Foreign Service Journal describes the work as comprising «the detail of each member of the class in rotation to the Visa Office, the Division of Passport Control, the Division of Foreign Service Administration, the Commercial Office, the Bureau of Indexes and Archives, and finally the Geographical Division covering the particular country to which the new Foreign Service Officer is to be assigned.»

Foreign commerce, exchange and banking, and specialized studies in current political problems, will be discussed by experts. Many of the lectures will be given by state department officials and by foreign service officers, detailed to Washington. Outside institutions, such as the Chamber of Commerce of the United States and educational institutions will be called on for experts on the subjects under study, it is stated.

«The lectures and work of the school» the article explains, «will by no means be confined to what may be termed the technical prepara-

tion of the pupils for their immediate field duties. It is the aim of the school board to give them in addition an insight into the operation of the Government and some of the major problems confronting it, and in general to stimulate their interest in the study of international relations and politico-economic questions. *

Russian Petroleum

Reports of another important oil deal with Russia aroused keen interest in financial circles in New York, reports the New York Commercial. It is believed that a fight for Russian oil is impending between American and European interests.

The world oil combination made agreement two years ago by which it was intended to prevent Russia from pitting one concession against another in the oil fields. Shortly after the so-called «truce» was signed, however, the Royal Dutch Shell combine, assuming that the agreement referred only to concessions, bought 200,000 tons, of Russian oil. This purchase started a competition among the oil interests of the world, which has again given the Soviet Russian Government the opportunity to play one group against another.

The Standard Oil Co. recently completed negotiations for a purchase of 700,000 tons of oil from Russia; and France, with a recent purchase of 83.500 tons, has brought its total up to about 400,000 tons. Italy has bought 200,000 tons, and Germany about 197,000 tons. The immense purchase by the Standard led to the belief in some quarters that the American company aims at a monopoly on the Russian output.

It is understood that Russia means to keep the Baku-Grozny fields, THE

selling the product only. The Saghalien concessions have just been handed over to Japanese interests. It is estimated that there will be 50 per cent more borings in the Russian fields during 1925 than in 1924. Experts say that the Soviet Government plans greatly to increase the export of oil.

World Cotton Standards

Representatives of European and American cotton associations with Department of Agriculture officials at Washington, recently, for the puspose of preparing forty sets of the Universal Cotton Standards to be used in international cotton trade during the coming crop year. A number of the sets will be distributed among the various foreign exchanges which have agreed to use the Universal Standards, and copies will be on file also with the various exchanges in the United States. Fach nation draws its set of standards from among the forty sets by casting lots. The United States keeps one set at the Department of Agriculture and deposits a second set in a vault of the United States Treasury as a reserve in case of accident. The standards for the coming year are selected by comparison with a set of the standards of the preceding year.

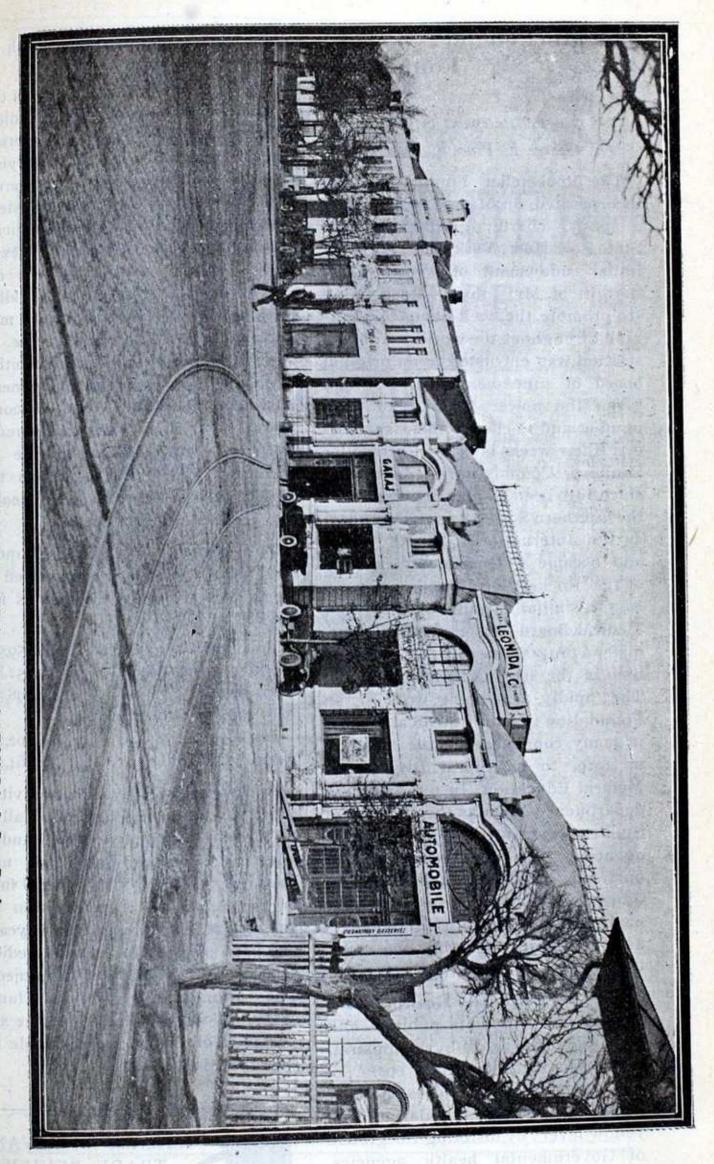

The standard grades range from pure white staples over an inch long used in fine fabrics, down to lint cotton which is almost powder and is used in felting and explosives. A fraction of an inch difference in length of staple means a great deal to the cotton industry, and by establishing standards of quality the producers and manufacturers are reasonably sure of knowing what quality of material they are using. The reason why representatives of the industry make the long trip to Washington each spring is that the standards deteriorate with the passage of time. The cotton

fiber has a hollow center, and oils in the fiber cause it to discolor after a time. Even when cotton is kept in a vacuum away from the air a slight

change takes place.

Representatives of the Liverpool Cotton Association and of the Federation of Master Cotton Spinners' Associations, who were in Washington, participated informally in the confer-These organizations had previously indicated that they would not renew their agreement to use the Universal Standards during the 1925-26 crop year, but their presence at the conference was construed as indicating a more favorable attitude toward the standards. Secretary of Agriculture William M. Jardine in extending the welcome of the department to the conferees, urged them to come to a common understanding on the cotton standards. «The standardization of farm products», he declared, «is a vital necessity in bringing about orderly marketing so as to reduce the spread in prices between producers and consumers. One of the difficulties of agriculture is the low price to the producer and yet the consumer is paying all that he can. We must have standardization to reduce this spread.» «Orderly marketing», he continued, « is not possible until you have orderly production, in which standardization is an essential feature. Our desire is to try to come to a common understanding on a workable plan of standardization that will help all concerned, which will cut down the spread and get back to the producer as much as possible for his efforts. »

The United States has standards for thirty-eight farm products, but cotton is the only one for which international standards are adopted. The Department of Agriculture is interested in extending the practice of international standardization to wool and other products.

The Rockefeller Foundation

(A statement by Dr. George E. Vincent, President)

The Rockefeller Foundation was incorporated, on May 14, 1913, under a special charter granted by the State of New York and with an initial endowment of \$ 100,000,000, the gift of Mr. John D. Rockefeller, «to promote the well-being of mankind throughout the world». Administration was entrusted to an original board of nine members, who were given the power to add to their number and to choose their successors. A few weeks later the Rockefeller Sanitary Commission, which had since 1910 been combating disease in the Southern States, was re-organized as the International Health Board and became a departmental agency of the Rockefeller Foundation. In 1914, a similar subsidiary, the China Medical Board, was created to administer a programme of medical education in the new Oriental Republic. The rapidly developing work of the Foundation in aiding medical schools in many countries led the trustees, in 1919, to set up a Division of Medical Education. In 1923, a fourth department known as the Division of Studies was created. Through these agencies the Foundation has cooperated, chiefly in public health projects and the improvement of medical education, with Governments and institutions in eighty one countries.

The International Health Board has sought to promote public health throughout the world by demonstrating the methods and costs controlling certain diseases, notably hookworm disease, malaria, yellow fever; by fostering the growth of Governmental health agencies, and by encouraging the growth of schools of hygiene.

From the outset the example of the Rockefeller Institute for Medical Research, the success of the International Health Board in applying scientific knowledge, and the interest of the Foundation in aiding Western medicine in China suggested policies which have been consistently devel-Public health work in cooperation with Governments called for a supply of specially trained men and women. The dependence of sound preparation for preventive medecine upon an efficient general medical education has increasingly clear. Thus the Foundation has come to concentrate its attention and resources upon the closely related fields of public health and medical education.

The expenditures of the Foundation during 1924 have amounted to \$ 92,476,937, roughly divided as follows:

Public health 8	24,559,057
Medical education	THE RESERVE OF THE PARTY OF THE
War relief	22,298,541
All other philanthropic	
work	11,302,262
Administration	r,464,224

In carrying on its various activities the Foundation has expended all of its income from year to year, and in addition seventeen-and-a-half millions (\$ 17,500,000) of its general fund or principal. A further sum of \$24,824,812, payable in future years, has been pledged to various medical schools and public health projects. The Foundation's principal funds are \$165,000,000 both the income and principal of which are available for appropriation.

Sericulture in Greece

By CHARLES E. DICKERSON, jr., II. S. Assistant Trade Commissioner, Athens.

The Asia Minor refugees brought two great industries from Turkey to Greece - carpets and silk. Along with the rapid expansion of carpet weaving in Greece since 1922, considerable impetus has similarly been given to the even more important branch of sericulture. Silk production has been a minor factor in the economic life of Greece for many years. This production, as well as most others, dwindled during the war years, but has now begun to thrive again and its future possibilities, enhanced by the abundance of skilled refugee silk workers from the Broussa district, are scarcely calculable.

Production figures for the past 4 years serve to illustrate in some degree the extensive progress which is already occurring:

Fresh cocoons 1,346,163 okes* 1921 1,531,830 . > 1922 1,601,855 1923 1924 2,000,000 (estimate)

Note the large increase in 1924, resulting chiefly from refugee cultiva-

tion. These activities, though aided in some degree by Government and Settlement Commission supervision are almost entirely self-directed Organized assistance from outside would undoubtedly hasten the rapid development of this important industry.

Up to the present only a small proportion of the annual silk crop is manipulated in Greece and the remainder exported - chiefly to Italy and France. There are only 11 silk factories in this country to-day exclusive of small hand working establishments of which there are perhaps a dozen times as many.

Extraordinary advances, again as a result of refugee cultivation, have also appeared during the past two years in Greek production of cocoon seed:

Boxes of 25 grams each

48,056 1922 143,682 1923 1924 233,297

Greece has now actually begun to export the seed to Persia and the Caucasus. It is anticipated that this production will also increase as the producers become better organized. Such a development is of obvious importance to the stimulation of domestic cocoon growing.

American Shoe Exports. - Ex. portation of American boots and shoes continues to rapidly increase and going as they do to every part of the world, comprehensively indicates the growth of this big factor in our manufacturing industry. The official records of American manufacturers show the value of boots and shoes turned out by the factories of the United States in 1909 at \$221,000,-000, while ten years later, in 1919, the value had amounted to more than one billion dollars. Meanwhile, the capital employed in the industry advanced from \$95,000,000 in 1910 to \$580,000,000 in 1919. The latest available figures of this industry show the output of 1,540 establishments in the country in 1923 at 950,479,000 and in 1921 at 867,000,000, as compared with 501,000,000 in 1914, being the year before the great war gave to the world a closer acquaintance with American manufactured footwear.

A Million in Gold a Day

nobed on Commission

More than a million dollars a day of the vast store of gold in the United States is undergoing the change from bullion to \$20 dollar gold pieces, or «double eagles», as they are called. The mints at Philadelphia, Denver and San Francisco will turn out \$180,000,000 in these new gold coins during the first half of 1925. When gold started to pour into the United States from all parts of the world, it seemed that the foundation for inflation was being laid. To discourage the tendency toward inflation by removing the temptation of using idle gold, the United States Treasury adopted the policy of paying out gold into circulation. It issued millions of dollars in gold certificates. But since under the law at least one-third of

the total of the gold certificates outstanding must be represented by the actual gold coins, nearly \$300,000,000 in these coins must be in existence to form a backing for the \$870,564,000 outstanding yellow-backed bills.

U. S. Tobacco Standards.—
Reduction of the several hundred type names for tobacco now in use to 27 definite types is urged by the Department of Agriculture. The proposed classification, a copy of which may be had from the Bureau of Agricultural Economics, Department of Agriculture, Washington, D. C., is an effort to bring about greater uniformity in the tobacco industry. Under the plan all American tobacco is divided into 6 classes and each class includes from 4 to 5 types:

MARKET REPORT of the IONIAN BANK, LIMITED

Constantinople Branch,

for May, 1925.

For daily rates on the Dollar see Page 250

Sterling Rates

Opening	May	2nd	915
Highest	May	2nd	915
Lowest	May	20th	980
Closing	May	30th	895

The Market opened weak and until the last ten days of the month there was practically no commercial demand for exchange, while at the same time considerable sales were made by the Bank of Athens and for the account of Tobacco exporters. These factors together with the shortage of Turkish money contributed to the weakness of Sterling, which fell steadily until the 21st May. An improvement then commenced following purchases to cover wheat and sugar shipments and the market closed firmer with an upward tendency.

Money was a little easier latterly as the annual influx of purchasers from the interior has now commenced.

Flour and Wheat.

There has been a decided improvement in the Wheat Market both abroad and locally and the crisis seems definitely to have passed. Here the imports have dropped to about one third of last month's and few important shipments are expected in the immediate future. Business is, however, rendered a little difficult by the fact that the 5,000 tons of wheat purchased by the Government, as mentionned in our February report, has been milled and is being sold below present cost prices. We understand that certain interested merchants are treating for the purchase

of this lot. Further, a good deal of money has been lost recently in some quarters and those involved are handicapped to some degree.

Crop reports from all cerial-producing countries except North America are satisfactory and, should they materialise, the market should tend to weaken later on.

In the United States, although the area sown last Autumn was considerably larger than that of 1923, the Winter killing is reported to be over 20% of the sown area and the harvesting area for Winter Wheat is thus reduced to 90% of the 1924 area which, taking into consideration the areas sown, is estimated to produce a yield of 75% of last year's Winter Wheat. On the other hand the Spring Crop conditions seem very favorable and perhaps the pessimistic reports from that country are thus not wholly justified.

Wheat imports during the period May 2nd, to May 30th were: Anatolia 1305 tons, America 100, Argentine 5350, Thrace 307; total 7,062 tons.

End of Month Prices per oke in bulk, duty paid; were: Wheat from Anatolia 21 piasters, Ditto, Second Quality 20, Hard Winter Wheat 23, Manitoba Wheat No. 3 24, Australian 221/4-221/2, Rosafé 223/4.

Locally Milled Flour, Integral -L.T. 16.50 per sack of 72 kgs.

Barley.

The stagnancy which was shown at the end of April continued throughout the month of May and very little business was effected.

MARKET REPORT OF THE IONIAN BANK LIMITED. (Continued)

End of Month Quotations: Piasters per oke:

1st Quality, in bulk, duty paid. . . 133/4 Forage, in sack, f. o. b. 131/4/133/4

Tea.

The Market during the first halfmonth was weak both locally and
abroad and quotations fell about two
pence all round. Subsequently a demand for Indian Orange Pekoe helped
to re-establish a firmer tone and all the
local stocks of this quality have been
sold and shipped to Persia. There is a
report that the Persian Government is
about to give a monopoly for the import of tea, and should this be correct
it will probably have a depreciatory
effect on this market.

Pence per lb: Ceylon Orange Pekoe 19 to 22, Jaffa Orange Pekoe 19-22, Java Pekoe 18-19, Indian Orange Pekoe 21-26, Indian Pekoe 18-19, China 11-16.

Coffee.

The existing stagnant conditions continued to prevail during the first part of the month but during the last ten days there was a marked change and prices, which had previously been falling steadily, rose sharply about 12 to 15 per cent. This might be regarded as being rather surprising, for the market still seems nervous and uncertainty is manifested at consuming centres, which continue using local stocks and appear afraid to pass orders to origin, more especially for late delivery at two to three months. would indicate an anticipated drop in prices, but the market has become very sensitive and three is a strong feeling that we are now approaching the moment when stock-holders will be forced to commence replenishing their stocks.

This sharp rise would signify that a rush is expected, but it is difficult to

iudge how far it indicates the true state of affairs.

American supplies will soon be exhausted and Brazil will then command the market.

Latest Quotations:

Local quotations in transit:

Rio No. 4 96/- to 98/-.

Sugar.

In general the market remained weak, there being some spasmodic movements in Whites abroad and only a few minor transactions here. The combine mentioned in our previous report has materialised, but is confined to the holders of large stocks, the majority of whom are probably losing £6 to £7-/- per ton at present, and certain commission agents, who have agreed to place no orders until September. Even those who have not joined this syndicate are very reserved regarding importing.

Crop reports from Germany are satisfactory and from Czechoslovakia, where the cultivated area is 25% more than last year's, above the average. We hear, however, in regard to Brazil, that torrential rains have fallen during the last ten days, causing floods and paralysing almost the entire crop, many mills having had to close down definitely in spite of an enormous amount still to be harvested.

Prices are now almost those of prewar which, when increased labor charges, freight rates etc. are considered

MARKET REPORT OF THE IONIAN BANK LIMITED. (Continued)

does not augur well for the future of this industry unless steps are taken to control production.

Quotations:

Czecho-Slovak Granulated, c. i. f. £ 18/0/0 per ton, in transit 18/10/0. Cubes, c.i.f. 19-/- to 19/10/0, in transit 19-/- to 19/5/0.

Rice.

Market fairly active.

Prices in Countries of Origin:

Rangoon (Alexandria) No. 3 double bags £ 16/0/0, per ton, c.i.f. Cons/ple.

Siam (Alexandria) No. 1 double bags £ 17/13/0, per ton, c.i.f. Constantinople.

Textiles.

We understand that a corner in sheetings has been made in Port Said and that prices were forced up 2/2 in a short period.

The buying season has now commenced and from 1,500 to 2,000 bales were sold here during the last week. The market here is inclined to be bearish while in Greece it is slow and Roumania is handicapped owing to exchange difficulties.

On the whole, crop prospects are good excepting that in Texas there has been insufficient rain. We await with interest the first Government Cotton Report which should be available early in June.

American Sheetings:

«A» (3yds. equal 1 lb.), 15 cents per yard, c.i.f. Constantinople. Local market price per piece of 40 yards (duty paid) Ltqs. 14.00.

Japanese Sheetings:

«CCC» (13 ½ lb.), 20/8 c.i.f., per piece of 40 yards. On spot, in transit,

22/2. Local market price for same (duty paid), Ltqs. 13 20.

«Dragon C» (13 lbs.), 20/- c.i.f., per piece of 40 yards. On spot, in transit, 20/8. Local market price for same (duty paid), Ltqs. 10.80.

Carpets.

There were several European and American houses represented in this market during the month and some important sales were effected, though business in Persians was quiet. Holders show a considerable anxiety to liquidate stocks, which are quickly accumulating, with a consequent weakening in prices, and two lots of Caucasians consisting of 2,030 and 1,500 pieces were rapidly sold off for £12,000 and £10,500 respectively.

Arrivals. - Persia: Large arrivals of Mossuls, Strips, Gioravans and Tabris.

Caucasus 130 bales containing Shirvans and Gendje Kasaks.

Wax.

Approximately 21 tons were sold at prices about 186-188 piasters, though one lot of 11 bags Black Sea district fetched as much as 192 piasters.

The market is steady and stocks are small; the new crop is expected in about one month's time.

Mohair.

The situation here remains unchanged and sales were confined to 16 bales of inferior Ak-Chehir at 185 Piasters. The new clip has started to arrive and the report we received on 2000 bales of various districts was that it was very satisfactory hair of good length. It is difficult to estimate the amount of the

MARKET REPORT OF THE IONIAN BANK LIMITED. (Concluded)

clip but it is at present approximated at 35,000 bales. About 8000 bales of the old clip is still on hand.

The statistical position of Mohair is sound but unfortunately the consumption is restricted and both money and

confidence are lacking.

American statistics estimate the coming clip at 25% more than last year's and it is reported that it will suffice to meet the needs of American consumers.

Wool.

No change has taken place in the local situation and no sales were effected. The New clip has not yet commenced to arrive from the interior, where it is being bought at round about 95 piasters per oke.

At the London Auctions at the beginning of the month grease wools were priced 15 to 20 per cent lower, the greater part of the offerings being with-

drawn.

It is reported that all Australian sales have been postponed until July.

Nuts.

Reports of the new crop prospects are very good and September/October shipments have been offered at 120 piasters, f.o.b. Kerassund. Contracts for forward delivery have been made

during the month for from 4,000 to 5,000 bags and present prices are 145 to 146 piastres per oke.

There still remain 3,000 to 4,000 bags

of the old crop on hand.

Sweet Almonds.— Piasters 156 per oke, free dépôt Smyrna.

Corrigenda. — In our last month's report Almonds were quoted «f.o.b. Kerrassund» in error.

Gum Tragacanth.

The market was dead, no sales having taken place.

Furs & Skins.

There was some brisk business done in Fox and Marten and prices remained firm. It is expected that the market will remain quiet from now onwards until August:

Foreign Concerts re-Radiocast

Following another successful radiocasting of a London program to an American radioaudience recently, the Radio Corporation of America announced that enough progress had been made in recent experiments to guarantee that, eventually, the entertainment, music and speech of every other continent will be brought into the homes of the United States.

When the technical conditions for the reception and distribution of foreign programs in the United States have been confirmed by the present tests, the corporation will undertake a national referendum of radio listeners to determine the type of program desired from abroad.

The program played at the Hotel Savoy in London the other night, was received in New York clearly. It was transmitted by land wire from the hotel to a station at Chelmsford, Eng., crossed the Atlantic on a 1600- meter wavelength to the receiving station at Belfast, Me., and from there came on a 122- meter wavelength to the experimental station at Van Cortland Park. It came from there by land wire to station WJZ and was reradiocast to the Nation on a 445- meter wavelength.

^{*)} Note 1—The new Turkish measures of weight, length, and surface are based on the Metric System. The new unit of length, the metre, is generally-designated "yeni" arshin to distinguish it from the old unit, the "eski" arshin. In all the ministries and other government administrations in Constantinople the Metric System is today in practice, though the old measures are still used in some of the provinces of the interior. The Metric System is in use in all the Balkan States.

^{**)} Note 2—The Mining Law fixed at 15,000 new deunums or 3750 hectares, equivalent of 9266.77 acres, the maximum area for permit.
